RETRACTED AS PROOF

ARCHIVE HISTORIQUE - T1'-T4 argument invalidated

Editorial notice - 20 October 2026

The historical T1'-T4 chain does not prove the Riemann hypothesis. The public erratum of 13 October 2026 identifies errors in T2 (weighted Gram-matrix bound) and T3 (wave-packet normalization and capture argument).

Earlier titles, abstracts and claims of complete or journal-ready proofs are historical claims withdrawn as proof arguments. This withdrawal does not assert that every mathematical object cited is false.

This editorial page has been added to the historical PDF. All original pages follow with their content unchanged. This is neither a recompilation nor a new mathematical result.

Public T1'-T4 erratum - 13 October 2026

Demonstration — T1′→T4 analytic scheme (non-resolutive)

Alexandre Couret; InterIA Mathematical Collective

February 27, 2026

T1′ — Explicit formula

$$\sum_{\rho} \widehat{\phi}(\gamma_\rho) = \frac{1}{2\pi} \int K\widehat{\phi} - \sum_{n} \frac{\Lambda(n)}{\sqrt{n}} (\phi(\log n) + \phi(-\log n)).$$

T2 — Spectral framing

Gram $G^{(w)}$, locality $|\xi_\alpha - \xi_\beta| \le A$, p-adic decay $\Rightarrow \lambda_{\min}(G^{(w)}) \ge 1 - S > 0$.

T3 — Wave-packet

Build $\widehat{\phi}_T$ around γ_0; Arch $\to 0$, primes $\to 0$, zeros $\to 1$ (frame capture) $\Rightarrow$ contradiction in this scheme.

T4 — Cross-positivity

Two positive forms (zeros/primes) $\Rightarrow$ cross-inequality; equality enforces the critical symmetry.

Takeaway

We demonstrate the scheme/bounds (not RH). Journal-ready sources + CI + guides in the repo.
